

Manisha Reddy Janga

(Senior Digital UI/UX Designer)

+1 (908) 301-6962 | Jangamanishareddy9@gmail.com

PROFESSIONAL SUMMARY

- Experienced Digital UI/UX Designer with expertise in user experience research, interaction design, interface design, usability evaluation, and human-centered design for enterprise applications.
- Skilled in understanding user needs, customer expectations, business objectives, and stakeholder feedback to create intuitive, accessible, and efficient digital experiences.
- Experienced in applying qualitative and quantitative research methods, including user interviews, contextual inquiry, usability testing, surveys, and observational research.
- Strong ability to synthesize user feedback and stakeholder sentiment into actionable insights, research themes, prioritized recommendations, and design improvements.
- Proficient in translating research findings into user journeys, personas, empathy maps, service blueprints, storyboards, task flows, and information architecture.
- Knowledgeable in UI design principles, human-computer interaction, visual hierarchy, typography, color theory, spacing, responsive layouts, and accessibility best practices.
- Experienced in creating wireframes, interactive prototypes, high-fidelity mockups, and design specifications using Figma, FigJam, Adobe XD, and related design tools.
- Adept at collaborating with product owners, designers, engineers, strategists, and business stakeholders to align user expectations with product capabilities and delivery objectives.
- Capable of adapting quickly to changing product requirements, emerging research findings, evolving business priorities, and feedback from cross-functional teams.
- Strong empathy-driven approach to research, with an emphasis on active listening, unbiased questioning, identifying pain points, and understanding the context behind user behavior.
- Experienced in evaluating complex enterprise workflows and identifying opportunities to simplify navigation, improve task completion, reduce usability friction, and increase user satisfaction.
- Skilled in developing research reports, insight summaries, data visualizations, and storytelling presentations that communicate findings clearly to technical and nontechnical audiences.
- Knowledgeable in prototype evaluation, usability test planning, research facilitation, design iteration, and validating proposed solutions against user needs and business goals.
- Experienced in managing multiple design and research workstreams, prioritizing research backlogs, coordinating deliverables, and maintaining documentation across project milestones.
- Strong understanding of design handoff practices, including interaction behaviors, interface states, component specifications, accessibility considerations, and implementation guidelines for downstream teams.
- Effective communicator with strong organizational, time-management, presentation, and stakeholder-management skills, committed to delivering practical, evidence-based user experiences through independent work and team collaboration.

EDUCATION

- Bachelor of Technology, India.

TECHNICAL SKILLS

Category	Skills
UX Research	User Interviews, Contextual Inquiry, Usability Testing, Surveys, Field Studies, Observational Research, Heuristic Evaluation
Human-Centered Design	Empathy Mapping, Persona Development, User Needs Analysis, Human-Computer Interaction, Design Thinking, Accessibility
Research Synthesis	Affinity Mapping, Thematic Analysis, Sentiment Analysis, Insight Prioritization, Research Reports, Evidence-Based Recommendations

UI/UX Design	Interaction Design, Visual Design, Information Architecture, Responsive Design, Navigation Design, UI Best Practices
Wireframing & Prototyping	Low-Fidelity Wireframes, High-Fidelity Mockups, Interactive Prototypes, User Flows, Task Flows, Storyboards
Design Tools	Figma, FigJam, Adobe XD, Adobe Photoshop, Adobe Illustrator, Miro
UX Deliverables	Journey Maps, Personas, Empathy Maps, Service Blueprints, Design Specifications, Research Documentation
Usability & Accessibility	WCAG Principles, Accessibility Reviews, Cognitive Walkthroughs, Usability Metrics, Task Completion Analysis
Data Storytelling	Research Presentations, Data Visualization, Insight Dashboards, Stakeholder Readouts, Executive Summaries
Enterprise Design	B2B Applications, Enterprise Workflows, Complex Task Analysis, Design Systems, Component Libraries
Collaboration	Cross-Functional Workshops, Stakeholder Interviews, Product Owner Collaboration, Engineering Handoff, Design Reviews
Project Management	Research Backlog Prioritization, Sprint Planning, Requirements Gathering, Timeline Management, Multi-Project Coordination
Design Handoff	Interaction Specifications, UI States, Responsive Behavior, Component Documentation, Developer Collaboration
Manufacturing UX	Shop-Floor Workflow Research, Equipment Service Journeys, Parts Lookup Workflows, Technician Task Analysis, Service Process Mapping
Research Governance	Research Planning, Consent Practices, Research Repository Maintenance, Findings Traceability, Documentation Standards
Communication	Workshop Facilitation, Presentation Skills, Active Listening, Conflict Resolution, Stakeholder Management, Adaptability

PROFESSIONAL EXPERIENCE

Client: Duke Energy

Role: Senior Digital UI/UX Designer

Apr 2023 – Till Now

- Conducted user experience research for enterprise digital applications by engaging users, product owners, and business stakeholders to understand workflows, operational challenges, and usability expectations.
- Planned and facilitated user interviews, contextual inquiries, usability sessions, and stakeholder discussions to identify user pain points and uncover opportunities for improving digital experiences.
- Translated qualitative feedback and research observations into actionable insights, prioritized design recommendations, and clearly documented experience improvements aligned with product objectives.
- Developed user journeys, empathy maps, personas, task flows, and experience maps to communicate user behaviors, expectations, and challenges across complex business processes.
- Created wireframes, interactive prototypes, and high-fidelity interface concepts using Figma and related design tools to validate navigation patterns, interaction behaviors, and information hierarchy.
- Collaborated with product owners, designers, engineers, and strategists to clarify business requirements, align user needs with technical constraints, and define preferred experience concepts.
- Applied human-centered design principles, visual design fundamentals, accessibility considerations, and usability best practices to improve consistency and clarity across enterprise interfaces.
- Evaluated existing digital workflows to identify unnecessary steps, confusing interface elements, navigation challenges, and opportunities to simplify task completion for business users.
- Synthesized stakeholder feedback and user research findings through affinity mapping, thematic analysis, and research summaries to establish common patterns and identify high-impact experience improvements.
- Prepared research reports, visual presentations, journey maps, and data storytelling materials to communicate key findings, design rationale, and recommendations to technical and business audiences.

- Partnered with designers to define prototype requirements, establish usability testing objectives, evaluate alternative concepts, and incorporate test findings into subsequent design iterations.
- Documented interface requirements, interaction states, behavioral expectations, design principles, and implementation guidelines to support consistent handoff to downstream development teams.
- Managed multiple research and design activities by organizing priorities, maintaining documentation, coordinating stakeholder reviews, and tracking deliverables against project timelines.
- Adapted research plans and design recommendations as product requirements evolved, incorporating new evidence and stakeholder feedback while maintaining a clear focus on user needs and business outcomes.
- Supported continuous experience improvement by reviewing usability feedback, validating design changes, maintaining research artifacts, and sharing recommendations that informed product roadmaps and future design decisions.

Client: MasterCard

Role: UI/UX Designer

Sep 2021 – Mar 2023

- Conducted UX research for enterprise financial and business applications by gathering user feedback, analyzing task requirements, and identifying opportunities to improve digital interactions and operational efficiency.
- Facilitated user interviews, stakeholder discussions, usability evaluations, and research workshops to understand user expectations, workflow challenges, and business priorities across product workstreams.
- Analyzed research findings using affinity mapping, thematic analysis, and qualitative synthesis to identify recurring usability issues and develop evidence-based design recommendations.
- Created user personas, empathy maps, journey maps, storyboards, and user flows to communicate user goals, decision-making patterns, and interaction challenges throughout digital experiences.
- Developed wireframes, clickable prototypes, and interface concepts using Figma, Adobe XD, and related tools to validate information architecture, navigation, and interaction design decisions.
- Collaborated with product managers, UI designers, engineers, and business stakeholders to translate research findings into clear experience requirements and practical design solutions.
- Applied UI design principles, visual hierarchy, typography, spacing, accessibility guidelines, and responsive design practices to improve usability and interface consistency across digital products.
- Evaluated existing workflows through usability testing and heuristic reviews, identifying interaction barriers, ambiguous labels, navigation problems, and opportunities to reduce user effort.
- Prepared research readouts, insight summaries, and visual presentations to communicate user sentiment, research evidence, and prioritized improvement opportunities to cross-functional stakeholders.
- Worked with design teams to define prototype scenarios, prepare usability testing activities, collect feedback, and iterate on proposed experiences based on research outcomes.
- Documented interaction requirements, screen behaviors, interface states, design patterns, and functional expectations to facilitate clear communication between design and development teams.
- Balanced multiple research initiatives and design deliverables by organizing research priorities, coordinating stakeholder participation, and maintaining progress against agreed project schedules.
- Adapted research approaches and design recommendations as product requirements changed, incorporating new findings while helping teams make informed decisions under evolving conditions.
- Supported design quality reviews by validating proposed interfaces against user needs, usability findings, established design standards, and documented product requirements.
- Maintained organized UX artifacts and research documentation to improve knowledge sharing, support product planning, and provide downstream teams with traceable design decisions and implementation guidance.

Client: Procter & Gamble, Cincinnati, OH

Role: UX Researcher / UI Designer

Jan 2019 – Aug 2021

- Conducted user research for enterprise and business applications supporting product-related operations, gathering feedback from business users and stakeholders to understand workflow requirements and usability challenges.
- Facilitated interviews, contextual discussions, and usability sessions to understand how users completed operational tasks and identify opportunities to simplify digital interactions and improve task efficiency.
- Analyzed qualitative research findings, stakeholder feedback, and observed user behaviors to identify common pain points, organize research themes, and recommend improvements to existing interfaces.
- Created user journeys, personas, task flows, storyboards, and experience maps to illustrate user goals, workflow dependencies, and potential friction points across business processes.

- Developed wireframes, interface mockups, and interactive prototypes using available design tools to communicate concepts, validate design assumptions, and gather feedback before implementation.
- Collaborated with product stakeholders, designers, and developers to translate business requirements and research findings into user-centered design concepts and clear interface specifications.
- Applied usability principles, information architecture, visual hierarchy, typography, layout standards, and accessibility considerations to develop clear and consistent enterprise user interfaces.
- Reviewed existing digital workflows to identify navigation issues, repetitive steps, unclear terminology, and opportunities to improve information presentation and user task completion.
- Documented research observations, key user needs, design recommendations, and testing outcomes in structured reports and visual presentations for stakeholder review and decision-making.
- Partnered with design teams to plan prototype evaluations, define testing scenarios, gather participant feedback, and refine interface concepts based on observed usability issues.
- Maintained design documentation covering screen layouts, navigation flows, interaction behaviors, and handoff requirements to support implementation by downstream development teams.
- Coordinated research activities, feedback reviews, and design deliverables across concurrent workstreams while responding constructively to changing requirements and project priorities.
- Supported continuous design improvement by incorporating user feedback, communicating research insights, and validating proposed interface changes against documented user and business needs.

Client: Synchrony, Bengaluru, India

Role: UI Designer

Oct 2014 – April 2018

- + Supported user experience design activities for enterprise and customer-facing applications by gathering business requirements, reviewing existing interfaces, and identifying usability improvement opportunities.
- + Participated in stakeholder discussions and user feedback sessions to understand customer expectations, business workflows, interface challenges, and opportunities to improve digital interactions.
- + Assisted with user research synthesis by organizing feedback, identifying recurring usability issues, documenting observations, and sharing findings with design and development teams.
- + Created basic user flows, wireframes, screen layouts, and interface concepts to communicate navigation structures, content organization, and proposed improvements to application workflows.
- + Applied fundamental UI design principles, including visual hierarchy, typography, spacing, alignment, color usage, and consistent interface patterns to improve usability and readability.
- + Collaborated with business analysts, developers, and project stakeholders to clarify requirements, validate proposed interface behaviors, and ensure that design deliverables supported business objectives.
- + Reviewed application screens and task flows to identify confusing navigation, inconsistent layouts, unclear labels, and interaction issues that could affect user efficiency and satisfaction.
- + Participated in prototype reviews and usability feedback discussions, helping document observations and incorporate relevant findings into updated interface designs.
- + Prepared design documentation, screen specifications, navigation flows, and visual reference materials to communicate interface requirements to development and testing teams.
- + Coordinated design reviews and feedback updates with project team members, maintained organized design artifacts, and supported delivery of assigned work within project timelines.
- + Adapted to evolving requirements by incorporating stakeholder feedback, revisiting design assumptions, and collaborating with team members to resolve usability and implementation questions.
- + Contributed to continuous improvement of digital experiences by supporting interface validation, documenting design changes, and ensuring consistency with established UI guidelines and user expectations.
