

Manisha Reddy Janga

(Senior UX Designer)

+1 (908) 301-6962 | Jangamanishareddy9@gmail.com

PROFESSIONAL SUMMARY

- + Results-oriented Senior UX Designer with 10+ years of experience designing enterprise digital products by combining human-centered design, user research, information architecture, interaction design, usability testing, and visual design to deliver intuitive user experiences across complex business applications.
- + Accomplished UX professional with extensive expertise collaborating with product managers, software engineers, business stakeholders, and cross-functional Agile teams to transform complex workflows into scalable, user-centered digital solutions using Figma, Adobe XD, Sketch, and Axure RP.
- + Experienced User Experience Designer specializing in digital product design, qualitative and quantitative user research, customer journey mapping, wireframing, interactive prototyping, and usability evaluation for enterprise-scale applications and financial software platforms.
- + Innovative UX Designer with a strong background in human-centered design, future visioning, strategy development, interaction design, and information architecture while delivering high-fidelity prototypes and intuitive user interfaces for data-intensive digital products.
- + Senior UX Design professional with proven expertise conducting user interviews, usability testing, heuristic analysis, workflow optimization, and customer research to improve product usability and support strategic product roadmap decisions.
- + Creative UX Designer experienced in designing responsive digital products through user-centered design methodologies, visual composition, typography, spacing, hierarchy, accessibility, and interaction design while supporting Agile software delivery.
- + Highly skilled UX Designer with expertise in customer journey mapping, system mapping, user stories, storyboards, wireframes, interactive prototypes, and design systems to create seamless enterprise user experiences across complex business environments.
- + Results-driven User Experience professional with extensive experience applying qualitative research, quantitative research, usability testing, information architecture, and interaction design to develop intuitive financial software and enterprise digital solutions.
- + Experienced UX Specialist with strong knowledge of Agile methodologies, product strategy, design thinking, user research, wireframing, prototyping, and usability optimization while collaborating with engineering and product management teams.
- + User Experience Designer with comprehensive experience creating scalable design systems, reusable UI components, interactive prototypes, customer journeys, and user flows that improve usability and maintain consistency across enterprise applications.
- + Human-centered design expert with extensive experience translating business requirements, operational workflows, customer insights, and stakeholder feedback into engaging digital product experiences through collaborative design practices.
- + Accomplished UX Designer with deep expertise in visual design, information hierarchy, interaction patterns, usability engineering, accessibility, and enterprise design systems supporting modern digital transformation initiatives.
- + Senior UX professional experienced in delivering enterprise digital products through user interviews, contextual inquiry, usability validation, interaction design, information architecture, and cross-functional collaboration within Agile environments.
- + UX Design consultant with extensive experience developing intuitive interfaces for complex data-heavy applications using Figma, Adobe XD, Sketch, Axure RP, and modern design systems while ensuring exceptional user experience.
- + Strategic UX Designer with strong expertise in digital product strategy, future visioning, design thinking, usability research, customer journey mapping, and interactive prototyping to enhance enterprise software adoption and customer satisfaction.
- + User Experience professional with a successful track record of collaborating with multidisciplinary teams to design enterprise digital products through user-centered design, usability testing, research-driven insights, and iterative product enhancements.
- + Experienced UX Designer skilled in balancing business objectives, customer expectations, engineering constraints, and operational requirements through human-centered design, interaction design, and evidence-based decision making.
- + Accomplished digital product designer with expertise in designing financial software, complex workflows, enterprise dashboards, data-intensive interfaces, and responsive applications using research-driven UX methodologies.

- + Senior UX expert with extensive experience facilitating ideation workshops, stakeholder collaboration sessions, design reviews, usability studies, and prototype evaluations to improve digital product quality and user engagement.
- + Innovative UX professional experienced in creating wireframes, user flows, high-fidelity prototypes, storyboards, customer journey maps, and interaction models while supporting product management and software engineering throughout the development lifecycle.
- + UX Designer with extensive experience leveraging qualitative user research, quantitative analysis, usability metrics, and customer feedback to optimize digital experiences and prioritize high-value product enhancements.
- + Results-focused UX professional with expertise in visual design principles, typography, layout composition, spacing, hierarchy, accessibility, and interaction design while delivering enterprise-grade digital interfaces.
- + Experienced UX Designer with a strong background in Agile software development, collaborative product design, usability engineering, research synthesis, design systems, and scalable enterprise user experience solutions.
- + Human-centered UX professional with comprehensive knowledge of interaction design, information architecture, customer research, usability testing, digital product design, and strategic UX planning for enterprise environments.
- + Senior User Experience Designer with proven ability to deliver intuitive digital solutions by integrating user research, workflow analysis, design systems, interactive prototyping, and Agile collaboration across cross-functional teams.

EDUCATION

- + Bachelor of Technology, India.

CERTIFICATIONS

- + Certified AWS Developer Associate

TECHNICAL SKILLS

Backend Technologies	Core Java, Java 8/11/17, J2EE, Spring Framework, Spring Boot, Spring Batch, Spring MVC, REST APIs, SOAP Web Services, Microservices, Hibernate, JPA, JDBC, Multithreading, Concurrency, Spring WebFlux
Batch & Integration Technologies	Spring Batch, ETL Processing, Scheduled Jobs, Batch Processing, Data Migration, File Processing, Enterprise Integration
Frontend Technologies	Angular, ReactJS, Redux, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, AJAX
Messaging&Streaming Technologies	Apache Kafka, RabbitMQ, MQ, Event-Driven Architecture
Databases	Oracle, SQL Server, PostgreSQL, MySQL, MongoDB, Cassandra, Hibernate, JPA, ORM Frameworks, SQL, NoSQL Databases
Cloud&Container Technologies	AWS, Azure,Google Cloud Platform (GCP), Docker, Kubernetes, Amazon ECS, Amazon EKS, EC2, S3, Lambda, API Gateway, GCP
DevOps & CI/CD	Jenkins, GitHub Actions, Git, Bitbucket, Maven, Gradle, CI/CD Pipelines, Terraform, Infrastructure as Code (IaC)
AI & LLM Technologies	Gen AI, GitHub Copilot, OpenAI API, Azure OpenAI, AI API Integration, LLM API Integration, Conversational AI, Chatbot Development, Generative AI Workflows, Speech APIs, Vision APIs, TensorFlow
Monitoring & Logging Technologies	ELK Stack, Elasticsearch, Logstash, Kibana, Audit Tracking, Application Logging, Prometheus, Grafana, ELK Stack, OpenTelemetry,
Financial & Trading Technologies	Electronic Trading Systems, Trade Order Matching, Risk Analysis, Settlement Processing, Financial Messaging Systems, Trading Platforms, Reconciliation Systems, Market Data Processing
Streaming & Media Technologies	WebSockets, Audio Processing APIs, Video Processing APIs, Streaming Workflows, Media File Integration
Security&API Technologies	OAuth, JWT, API Gateway, Authentication & Authorization, Secure REST APIs
Testing & Monitoring	JUnit, Mockito, Selenium, Unit Testing, Automation Testing, Root Cause Analysis, Debugging, Performance Optimization, Application Monitoring

Methodologies	Agile Scrum, SDLC, Jira, Confluence, Code Reviews, Performance Optimization
Design & GUI Tools	Eclipse, IBM RAD/WSAD, NetBeans, Notepad++
App servers	IBM WebSphere, Apache Tomcat, BEA Web Logic, JBOSS
Design/Version Control	CVS, SVN, VSS, GIT
Operating Systems	Windows, Linux, UNIX
Defect Tracking	JIRA, Confluence, Bugzilla, Rational Clear Quest
Webservice Implementation	Axis 1.0,2.1, JWS DP2.1, Sun Metro, Sun Jersey, Apache Fire, Apache CXF
Infrastructure as Code	Terraform, Cloud Formation, ARM

PROFESSIONAL EXPERIENCE

Client: Duke Energy

Role: Senior UX Designer

Apr 2023 – Till Now

- + Leveraged human-centered design principles to transform complex business workflows into intuitive digital product experiences by collaborating closely with product management, engineering, and cross-functional stakeholders.
- + Conducted qualitative and quantitative user research, user interviews, contextual inquiry, and usability testing to uncover user needs, validate assumptions, and improve overall user experience.
- + Designed high-fidelity prototypes, low-fidelity wireframes, interactive mockups, and user flows using Figma, Adobe XD, Sketch, and Axure RP for enterprise digital applications.
- + Partnered with product managers, software engineers, and business stakeholders throughout Agile delivery cycles to create scalable UX solutions aligned with strategic product objectives.
- + Created customer journey maps, service blueprints, system maps, personas, and user stories to visualize end-to-end user interactions and optimize digital experiences.
- + Applied information architecture, interaction design, and visual design best practices to simplify complex financial software interfaces and improve task efficiency.
- + Facilitated design thinking workshops, ideation sessions, and collaborative discovery meetings to generate innovative concepts and validate solutions with cross-functional teams.
- + Produced design artifacts including storyboards, user journeys, wireframes, clickable prototypes, and detailed interaction specifications to support engineering implementation.
- + Improved product usability through continuous usability testing, heuristic evaluations, accessibility reviews, and evidence-driven design recommendations.
- + Collaborated with engineering teams to ensure accurate implementation of UX specifications while maintaining consistency with enterprise design systems.
- + Defined navigation models, content hierarchy, typography, spacing, layout, and visual composition standards to deliver intuitive user interfaces across digital platforms.
- + Worked extensively within established design systems while contributing reusable UI components, interaction patterns, and design guidelines for enterprise applications.
- + Supported product roadmap planning by identifying high-value features through customer research, usability insights, analytics, and stakeholder collaboration.
- + Balanced business requirements, customer expectations, and technical constraints to deliver user-centered digital product designs that aligned with organizational goals.
- + Designed responsive interfaces for data-intensive applications by improving information hierarchy, visualization clarity, and workflow efficiency.
- + Collaborated with strategists, business analysts, developers, and product owners to validate concepts through iterative prototyping and continuous user feedback.
- + Utilized Figma collaborative libraries, interactive prototyping, auto-layout, and component-based design methodologies to accelerate design delivery.
- + Documented user pain points, functional requirements, interaction behaviors, and usability findings to guide design decisions throughout the software development lifecycle.
- + Participated in Agile ceremonies including sprint planning, backlog refinement, design reviews, retrospectives, and release planning while maintaining UX deliverables.

Client: MasterCard

- + Collaborated with product managers, UX researchers, software engineers, and business stakeholders to design user-centered digital products that balanced customer needs, technical feasibility, and business objectives.
- + Performed in-depth user interviews, contextual research, usability testing, and behavioral analysis to uncover user pain-points and translate findings into actionable design improvements.
- + Developed intuitive information architecture, interaction design models, and user flows that streamlined complex business processes and enhanced overall usability.
- + Created responsive wireframes, interactive prototypes, high-fidelity mockups, and visual concepts using Figma, Adobe XD, Axure RP, and Sketch for enterprise-scale applications.
- + Applied human-centered design methodologies throughout the product development lifecycle to improve customer satisfaction and increase product adoption.
- + Designed complex data-heavy dashboards and financial software interfaces with a strong emphasis on hierarchy, readability, usability, and efficient workflow execution.
- + Facilitated cross-functional ideation workshops, design critiques, brainstorming sessions, and stakeholder reviews to refine product concepts and accelerate design decisions.
- + Produced customer journey maps, service blueprints, ecosystem maps, user scenarios, personas, and storyboards to communicate user experiences across multiple touchpoints.
- + Conducted qualitative and quantitative user research by combining usability testing, surveys, interviews, analytics, and observational studies to validate design hypotheses.
- + Worked closely with Agile product teams to deliver sprint-ready UX artifacts including wireframes, prototypes, interaction specifications, and acceptance-ready design documentation.
- + Maintained consistency across digital products by leveraging enterprise design systems, reusable UI components, standardized interaction patterns, and accessibility guidelines.
- + Optimized digital experiences by identifying workflow bottlenecks, reducing cognitive load, and simplifying navigation through user-centered interaction design.
- + Collaborated with engineering teams throughout implementation to ensure pixel-perfect execution of user interface designs and interaction behaviors.
- + Defined visual design standards including typography, spacing, alignment, composition, iconography, color systems, and responsive layouts across enterprise applications.
- + Evaluated product usability through heuristic evaluations, A/B testing, usability benchmarks, and customer feedback to continuously improve user experience.
- + Integrated business requirements, customer insights, and operational objectives into scalable UX strategies supporting enterprise digital transformation initiatives.
- + Supported product roadmap prioritization by identifying high-value features through customer research, usability metrics, and stakeholder collaboration.
- + Developed interaction patterns and navigation frameworks that improved discoverability, reduced task completion time, and increased operational efficiency.
- + Designed intuitive workflows for enterprise financial platforms by simplifying complex user interactions into efficient and scalable digital experiences.
- + Delivered detailed UX documentation including interaction models, task flows, process diagrams, user stories, annotations, and functional design specifications.
- + Applied future visioning techniques to conceptualize innovative digital experiences that aligned with evolving customer expectations and strategic business initiatives.

Client: Procter & Gamble, Cincinnati, OH**Role: Java Developer****Jan 2019 – Aug 2021**

- + Designed and developed Java 17 and Spring Boot microservices to manage FMCG supply chain operations, improving product dispatch accuracy and order tracking speed by 30%.
- + Built RESTful APIs for real-time product inventory and sales order management, integrating seamlessly with retail POS and distributor systems.
- + Engineered Kafka-based event streaming pipelines for synchronized product updates across multiple warehouses, ensuring data consistency across regional hubs.
- + Implemented distributed caching using Redis to accelerate frequently accessed SKU and pricing data, reducing API latency during high-traffic promotions.

- + Designed concurrent processing workflows with Java multithreading for parallel order validation and batch invoice generation.
- + Utilized Spring Boot Actuator for monitoring microservice performance across multi-region deployments in FMCG retail systems.
- + Integrated PostgreSQL and Oracle databases to maintain centralized product master data, ensuring data integrity across thousands of SKUs.
- + Applied TDD/BDD methodologies with JUnit, Mockito, and Cucumber for automated regression testing and stable feature rollouts.
- + Developed asynchronous REST endpoints using CompletableFuture for faster response handling during high-order volumes.
- + Implemented Redis Streams for live order queueing and processing in distribution centers, improving order throughput by 40%.
- + Created Kafka topics for real-time inventory sync between ERP, CRM, and warehouse systems, eliminating reconciliation delays.
- + Developed complex SQL joins and partitioned queries to support national-level FMCG sales reporting dashboards.
- + Automated performance benchmarking using JMeter and Linux shell scripts, ensuring consistent SLA compliance during promotional surges.
- + Leveraged Spring Boot Batch to process large datasets for monthly demand forecasting and distributor performance metrics.
- + Configured CI/CD pipelines in Jenkins to streamline microservice deployment across multiple FMCG business units.
- + Built rule-driven pricing APIs using Spring Boot and Redis caching, enabling faster promotion adjustments during dynamic pricing campaigns.
- + Refactored legacy order management systems into modular Spring Boot microservices, improving scalability and reducing downtime.
- + Applied OOP/OOD principles to design reusable domain models for customer, order, and inventory management modules.
- + Integrated Linux-based monitoring scripts to automatically detect service slowdowns and trigger proactive restarts for FMCG backend services.
- + Collaborated with business stakeholders to analyze supply chain data using cached analytics layers in Redis, improving replenishment accuracy by 25%.

Client: Synchrony, Bengaluru, India

Role: Java Developer

Oct 2014 – April 2018

- + Developed custom low-latency data ingestion pipelines using Apache Kafka and Flink for processing high-frequency trading data.
- + Designed and implemented microservices architecture for trading applications using Spring Boot and Kubernetes.
- + Built distributed caching solutions with Hazelcast and Redis to improve trade order execution speeds.
- + Created robust transaction logging systems using ELK (Elasticsearch, Logstash, Kibana) for compliance and audit tracking.
- + Implemented rate-limiting strategies in API gateways to prevent excessive requests in financial applications.
- + Designed a robust reconciliation system for matching executed trades with settlement reports in PostgreSQL.
- + Integrated FIX and SWIFT protocols for secure and standardized financial messaging between institutions.
- + Developed real-time trade risk analysis tools using Spark and machine learning models to identify anomalies.
- + Engineered serverless event-driven architectures with AWS Lambda and SQS for trade execution notifications.
- + Built multi-factor authentication (MFA) solutions using Keycloak and OAuth2 for secure financial system access.
- + Designed reactive programming models with WebFlux to handle concurrent trade data streaming efficiently.
- + Implemented blockchain-based smart contracts for secure and transparent settlement of financial transactions.
- + Optimized query execution plans in PostgreSQL and MySQL for handling large-scale historical trading data.
- + Developed automated testing suites using Selenium, JUnit, and Cypress to ensure robust trading application reliability.
- + Created AI-driven trade strategy simulations using TensorFlow to predict market movements and optimize execution.
- + Engineered custom financial dashboards using React, TypeScript, and D3.js for real-time data visualization.
- + Designed a financial anomaly detection system using unsupervised learning techniques to flag suspicious transactions.
- + Developed distributed trade order matching engines with gRPC and Protobuf for high-performance processing.
- + Integrated event sourcing patterns with Apache Kafka to enable replayable financial transaction history.

- + Implemented dynamic pricing models using AI-powered predictive analytics to enhance profit margins in trading.
